## Thilot Link Bridge LC.275

The Thilot link bridge is a key element in the one-layer bed system. This revolutionary growing system is a major step forward in reducing mushroom picking costs and improving the overall mushroom quality.

While pulling over the compost, the LC.275 forms the bridge between the 4-bed shelf in the growing rooms and the single-bed shelf inside the harvesting rooms. Similar to all the other Thilot equipment, this machine is fitted out with a heavy duty frame and bed lift system. The electric/ hydraulic power system guarantees a quick and seamless filling operation.

Innovative and customer-driven design of our equipment mark the future for mushroom growing.

Harvesting room with single-bed shelves and automated conveyor system for highly productive mushroom picking and handling.

The pulling winch HC.275 is used in combination with the LC.275 and capable of handling up to 90 mtr. of shelf with compost and casing soil.
