Thilot Pulling Winch PC.028

The single reel Thilot pulling winch model PC.028 is purpose built for filling mushroom growing shelves with phase II or III compost and / or casing soil simultaneously.

The design of the PC.028 is based on a hydraulic lift system for the reel. This in combination with a powerful drive system for the single cable reel makes the machine suitable for filling shelves up 30 mtr. long. For longer shelves our model PC.268 is available suitable for a shelf length up 90 mtr.

The cable reel of the PC.028 is driven through a planetary gear drive with electric motor combined with heavy-duty hexagonal couplings for years of trouble free operation. The hydraulic lift gives you a safe and simple operation of the machine.

For emptying, the combination of a C.275 with Emptying Conveyor TB.150 meets your needs for quick and smooth emptying of the growing beds.

Set-up with the Thilot head filling machine FS.478 gives you a perfect set of machines to deal with your mechanized filling operation.
