

# COMPOST PREPARATION EQUIPMENT

## GTL - Thilot Equipment Pre-Mix Turner SC.025

Our SC range of compost processors is specially designed for blending your success. That is to say your compost mixture for phase I production.

Build around the 'GTL-Thilot'-principle of the large pick-up drum, this pre-mix turner will gently treat your mixture and give it the kick extra needed.

Using an all-stainless steel construction in combination with a powerful drive system, this machine can handle hundreds of tons per hour. The pre-mix turner is operated in combination with supply and discharge conveyors systems capable of handling all your composting needs.

*The SC.025 can be used in combination with the  
GTL-Thilot straw bale feed conveyor KT.025.*

*The model SC.030 for large composting facilities,  
during the test set-up in our factory.*
